

S600 Double Turbo 360° Supa Mop Use Method

Easy Click

Bring the upper and lower discs together. Step on it with your foot and it's done when you hear a "click",

Simple Separation

Step on the fabric strips in the direction indicated by the screw and push outwards to separate.

Upright Wringer

○ Place fabric strips fully inside the wringer and keep upright so it does not wobble when it turned.

✗ Fabric strips are out of the wringer and handle does not in upright position.

Anti-Slip Handle

○ Hold the sliding grip lightly during dehydrating process. Remember to keep the handle upright and avoid it to wobble left or right.

✗ Gripping the handle directly instead of holding the sliding grip causes chafing and makes it hard to keep the handle upright.

Heels Up

○ Standing on tip-toe with your heels off the ground makes it easier to do the pressing motion.

✗ Having your heels on the grounds makes it hard to apply force.

TO AVOID DANGER,

PLEASE KEEP THIS PRODUCT AWAY FROM CHILDREN.

Manual Press Use Method

1. Turn on the manual press switch device.

2. Place the mop vertically into the wringer vat.

Move the mop up and down vertically for high-speed dehydration.
